

Grana Design

Sortiment 2025

Forord / Preface

Mens vi dyrker vores havekrukker og skaber små oaser af skønhed i vores hverdag, kan vi ikke ignorere de dramatiske forandringer, som vores planet gennemgår på grund af klimaændringerne. Disse ændringer har ikke kun konsekvenser for vores store naturområder, men også for vores egne baghaver.

Varmere temperaturer, ændrede nedbørsmønstre og hyppigere ekstreme vejrforhold udfordrer og tvinger os til at tænke anderledes. Planter, der engang trivedes i vores klima, kan nu kæmpe for at overleve, mens nye arter pludselig finder vej til vores haver. Det er en ny virkelighed, som vi, som haveentusiaster, er nødt til at forholde os til.

Men selv i denne tid med usikkerhed og forandring er der skønhed at finde. Måske er det i den vilde blomst, der trods alt springer ud i en sprække i cementen, eller i regnbuen, der bryder igennem skyerne, efter en storm.

Som haveelskere har vi også en rolle at spille i kampen mod klimaændringerne. Ved at vælge planter, der er tilpasset vores ændrede klima og krukker, som er produceret med fokus på bæredygtighed, kan vi være med til at gøre vores bidrag.

Samtidig kan vi lade os inspirere af naturens uforudsigelighed, dramatik og skønhed, hvilket har været omdrejningspunktet for billederne i dette års katalog.

Rigtig god fornøjelse med kataloget. Jeg håber, du vil lade dig inspirere.

Med venlig hilsen
Trine

While we tend to our garden pots and create small oases of beauty in our daily lives, we cannot ignore the dramatic changes that our planet is undergoing due to climate change. These changes not only have consequences for our large natural areas, but also for our own backyards.

Warmer temperatures, changed precipitation patterns, and more frequent extreme weather conditions challenge and force us to think differently. Plants that once thrived in our climate may now struggle to survive, while new species suddenly find their way into our gardens. It is a new reality that we as garden enthusiasts must deal with.

But even in this time of uncertainty and change, there is beauty to be found. Perhaps it is in the wildflower that still blooms in a crack in the pavement, or in the rainbow that breaks through the clouds after a storm.

As garden lovers, we also have a role to play in the fight against climate change. By choosing plants adapted to our changing climate, and pots produced with a focus on sustainability, we can contribute to making a difference.

At the same time, we can be inspired by the unpredictability, drama, and beauty of nature, which has been the focus of the images in this year's catalogue.

Enjoy the catalog. I hope it will inspire you.

*Best regards
Trine*

Ved containerordre:

Varene på side 6-95 kan mixes i samme container (på nær side 60-61).

Varene på side 96-105 kan mixes i samme container.

Varene på siderne 106-117 kan ikke mixes i container, men kommer hjem via Grama Designs lager.

Bæredygtighed / Sustainability

Hos Grama Design lægger vi stor vægt på vores sociale ansvar (CSR). Vores produktion af havekrukker ligger hovedsageligt i Vietnam, og det er vigtigt for os, at vore producenter har fokus på miljø, arbejdsforhold og bæredygtighed.

Vi har nogle fantastiske vietnamesiske leverandører, som har flere forskellige krukkeproduktioner i den sydlige del af Vietnam. Sammen med vores leverandører har vi udarbejdet en række minimumskrav, som alle produktionerne skal leve op til, så vi dermed bl.a. sikrer ordentlige arbejdsforhold.

I Vietnam er det normalt, at hele familier arbejder sammen på potterierne, og vores producenter ved Mekong Deltaet tilstræber, at der altid er arbejde til mindst et familiemedlem ved også at holde produktionen i gang i lavsæsonen. Dette gøres blandt andet ved at producere mursten i stedet for krukker.

Fra ler i Mekong Deltaet til smukke krukker i din butik

Leret, som Grama Design's terracotta-krukker bliver lavet af, kommer fra rismarkerne i området omkring Mekong Deltaet. Herfra bliver leret bragt til potterierne, hvor produktion af krukker har været et smukt håndværk gennem mange hundrede år.

Alle krukkerne er håndlavede, hvorfor de alle er unikke.

Ved brænding af krukkerne bruges der meget energi. Vores producenter bruger risskaller, hvilket er et affaldsprodukt fra risproduktionen, som brændsel i krukkeproduktionen. Dette er med til at skabe en god og bæredygtig produktion med et lavt energiforbrug.

At Grama Design, we place great emphasis on our social responsibility (CSR). Our production of garden pots mainly takes place in Vietnam, and it is important to us that our manufacturers focus on the environment, working conditions, and sustainability.

We have some great Vietnamese suppliers and manufacturers who run various garden pot production facilities in the southern part of Vietnam. Together we have established a set of minimum requirements that all productions must adhere to, ensuring proper working conditions.

In Vietnam, it is common for entire families to work together in the potteries, and our manufacturers in the Mekong Delta aim to ensure that there is always work for at least one family member even during the off-season. For example, by producing bricks instead of pots.

From clay in the Mekong Delta to beautiful garden pots in your store

Grama Design's terracotta pots are made of clay from the rice fields in the area around the Mekong Delta. From here, the clay is brought to the potteries where the production of garden pots has been a beautiful craftsmanship for many centuries.

All garden pots are handmade, making each one unique

A lot of energy is used in firing the pots. However, our manufacturers use rice husks, a by-product of rice production, as fuel in pot production. This helps create a sustainable production with low energy consumption.

Frostsikring af krukker / Frost-proofing of garden pots

Vand der fryser sprænger ikke kun vandrør i huse, men også havekrukker. Når temperaturen kommer under 0 grader, begynder vandet at fryse og udvide sig, hvilket betyder, at dine krukker kan frostsprænges.

Der er derfor ingen krukker, der er 100 % frostsikre. Når det så er sagt, kan langt de fleste frostsprængninger undgås ved at tilplante krukken korrekt.

Det er derfor vigtigt, at dine kunder følger nedenstående plantevejledning:

- Fyld krukken 1/3 op med Leca eller lignende materiale for at skabe et godt dræn. Drænet sikrer, at overskydende vand kan løbe fra, så krukken ikke frostsprænges.
- Stil krukken så drænhullet ikke er blokeret.
- For at sikre, at drænet er frit, er det vigtigt, at krukken hæves fra fliser eller jord, f.eks. ved at lægge nogle små sten eller pottefødder under.
- Krukken må ikke stå i en underskål om vinteren.
- Hvis du ikke anvender pottefødder og leca, men tager planterne op af krukken inden vinteren, er det vigtigt at krukken tømmes helt for jord.
- Undgå at støde krukkerne, hvis de står ude om vinteren.
- Der ydes ingen garanti på krukken ved tekniske ændringer (f.eks. selvvandig, coating mv.).

Water that freezes not only bursts water pipes in houses, but also garden pots. When the temperature drops below 0 degrees Celsius, the water begins to freeze and expand, which means that your pots can crack in frosty weather.

Therefore, there are no pots that are 100% frost resistant. However, most frost damages can be avoided by planting correctly in the pot.

It is important that your customers follow the planting guidelines below:

- *Fill the pot 1/3 with Leca or similar material to create good drainage. The drainage ensures that excess water can exit the pot, preventing the pot from cracking due to frost.*
- *Place the pot so that the drainage hole is not blocked.*
- *To secure a proper drain, it is important that the garden pot is raised from the ground by use of pot feet or pebbles.*
- *The pot should not be placed in a saucer during winter.*
- *If you do not use pot feet and Leca, but remove the plants from the pot before winter, it is important to completely empty the pot from soil.*
- *Avoid bumping into the pots if they are left outside during winter.*
- *There is no guarantee on garden pots that have been technically modified (e.g. self-watering, coating etc.).*

Choco Terracotta

Bæredygtigt produceret.

Håndlavede.

Frostsikre ved korrekt behandling.

Fremstillet af flere forskellige slags ler tilføjet farvestof, som varierer fra lys nougat til mørk chokolade, hvorfor farvevariationer altid vil forekomme.

Sustainably produced.

Handmade.

Frost-resistant if handled correctly.

Made from several different types of clay added with dye, ranging from light nougat to dark chocolate, why color variations will occur.

Stentøj / Stoneware

Smukke, håndlavede stentøjskrukker.

Da alle krukker er håndlavede og brændt i store ovne fyret med træ, bliver hver enkelt krukke unik. Du finder derfor aldrig to helt ens krukker, hvilket er en del af charmen ved de smukke krukker.

Frostsikre ved korrekt behandling.

Krukkerne fås i forskellige overflader og farver.

Beautiful handmade stoneware pots. All pots are handmade and fired in large wood-fired kilns, why each pot becomes unique.

Therefore, you will never find two identical pots, which is part of the charm.

Frost resistant if handled correctly.

The pots are available in several surfaces and colors.

Salome

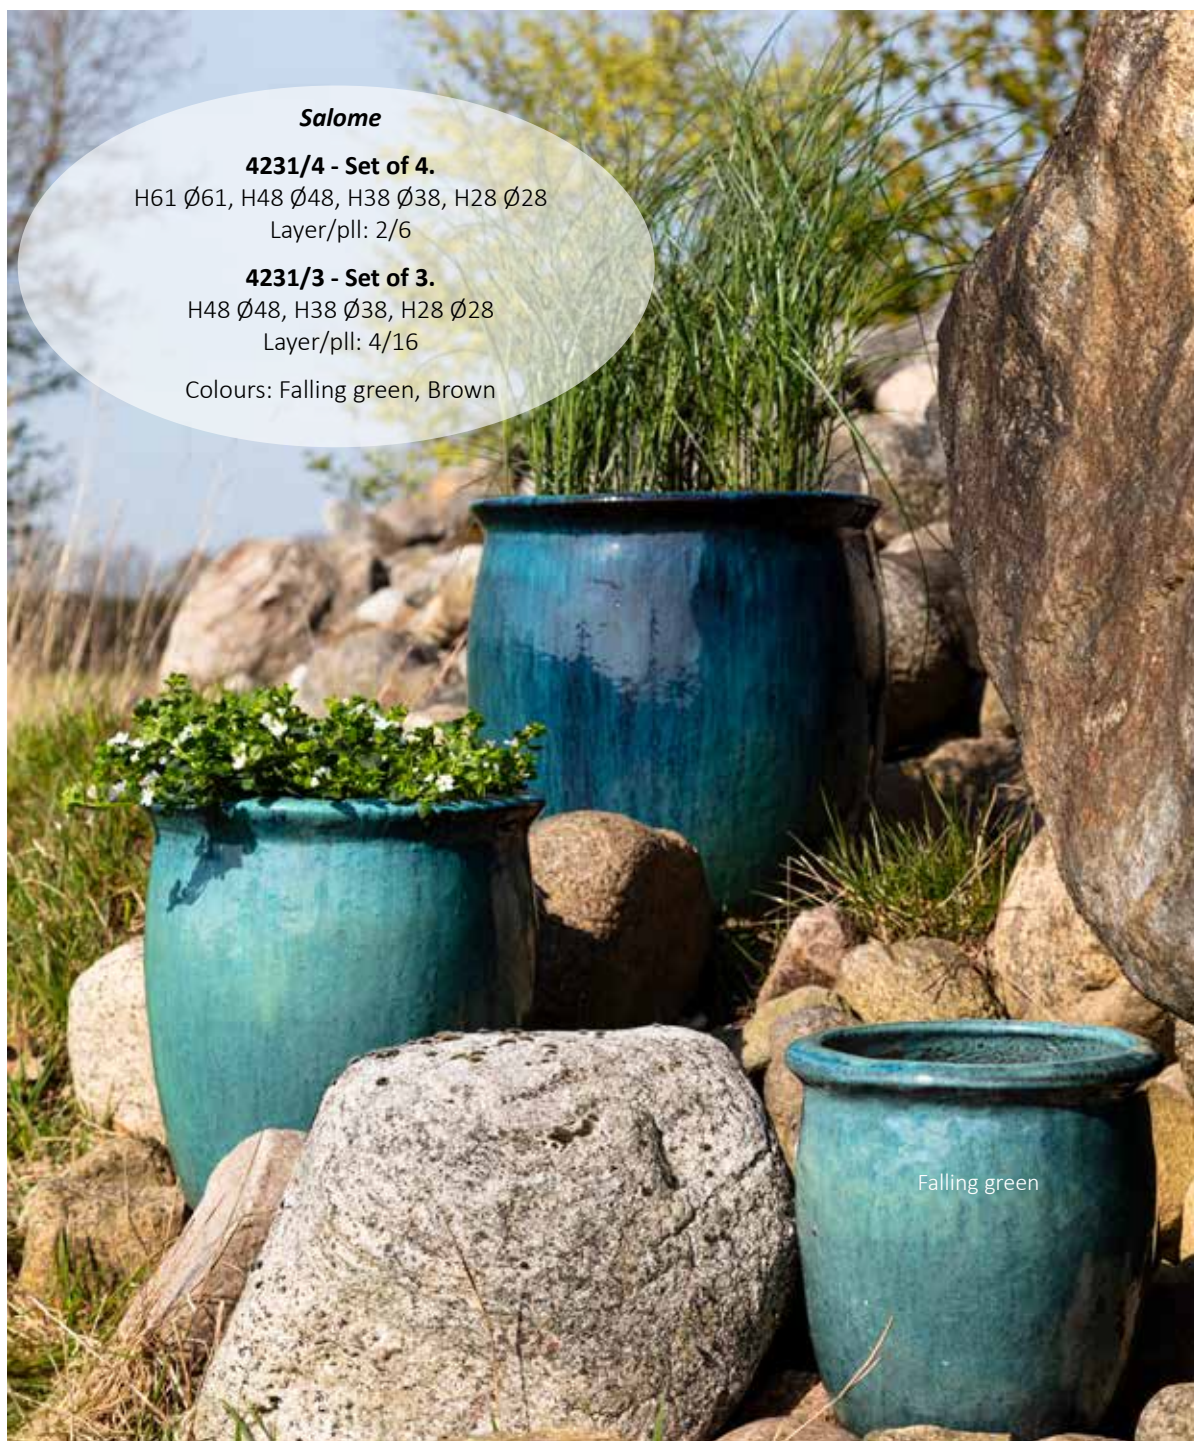

4231/4 - Set of 4.

Layer/pll: 2/6

4231/3 - Set of 3.

H48 Ø48, H38 Ø38, H28 Ø28
Layer/pll: 4/16

Colours: Falling green, Brown

Farvevariationer

Alle stentøjskrukker kan produceres i flere forskellige farver.

Vær opmærksom på, at der vil forekomme farvevariationer.

Farvevariationerne skyldes, at alle krukker er håndlavede, ligesom farven vil variere alt efter, hvor i ovnen krukken har stået, da den blev brændt.

Det betyder, at en farvevariation på +/- 8 % må accepteres.

Colour variations

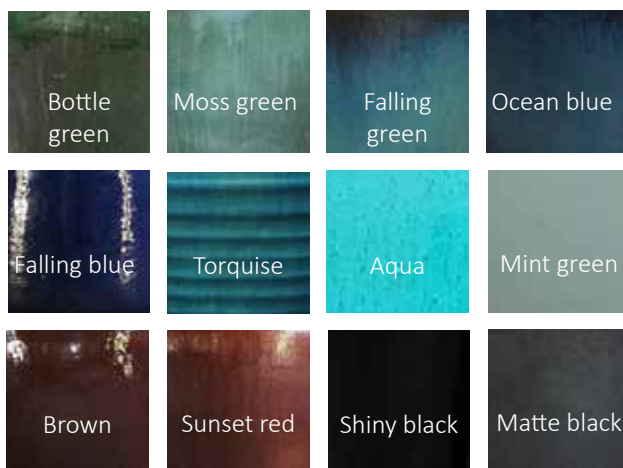

All stoneware pots can be produced in several different colors.

Please note that color variations will occur since all pots are handmade.

The color may also vary depending on where in the kiln the pot was placed during firing.

This means that a color variation of +/- 8% must be accepted.

Stentøjs-farver / Stoneware colours

Lava-farver / Lava colours

Antik stentøjs-farver / Antique stoneware colours

Black Soil Fontæner / *Black Soil Fountains*

Skønne og sjove fontæner som skaber liv og stemning i haven.

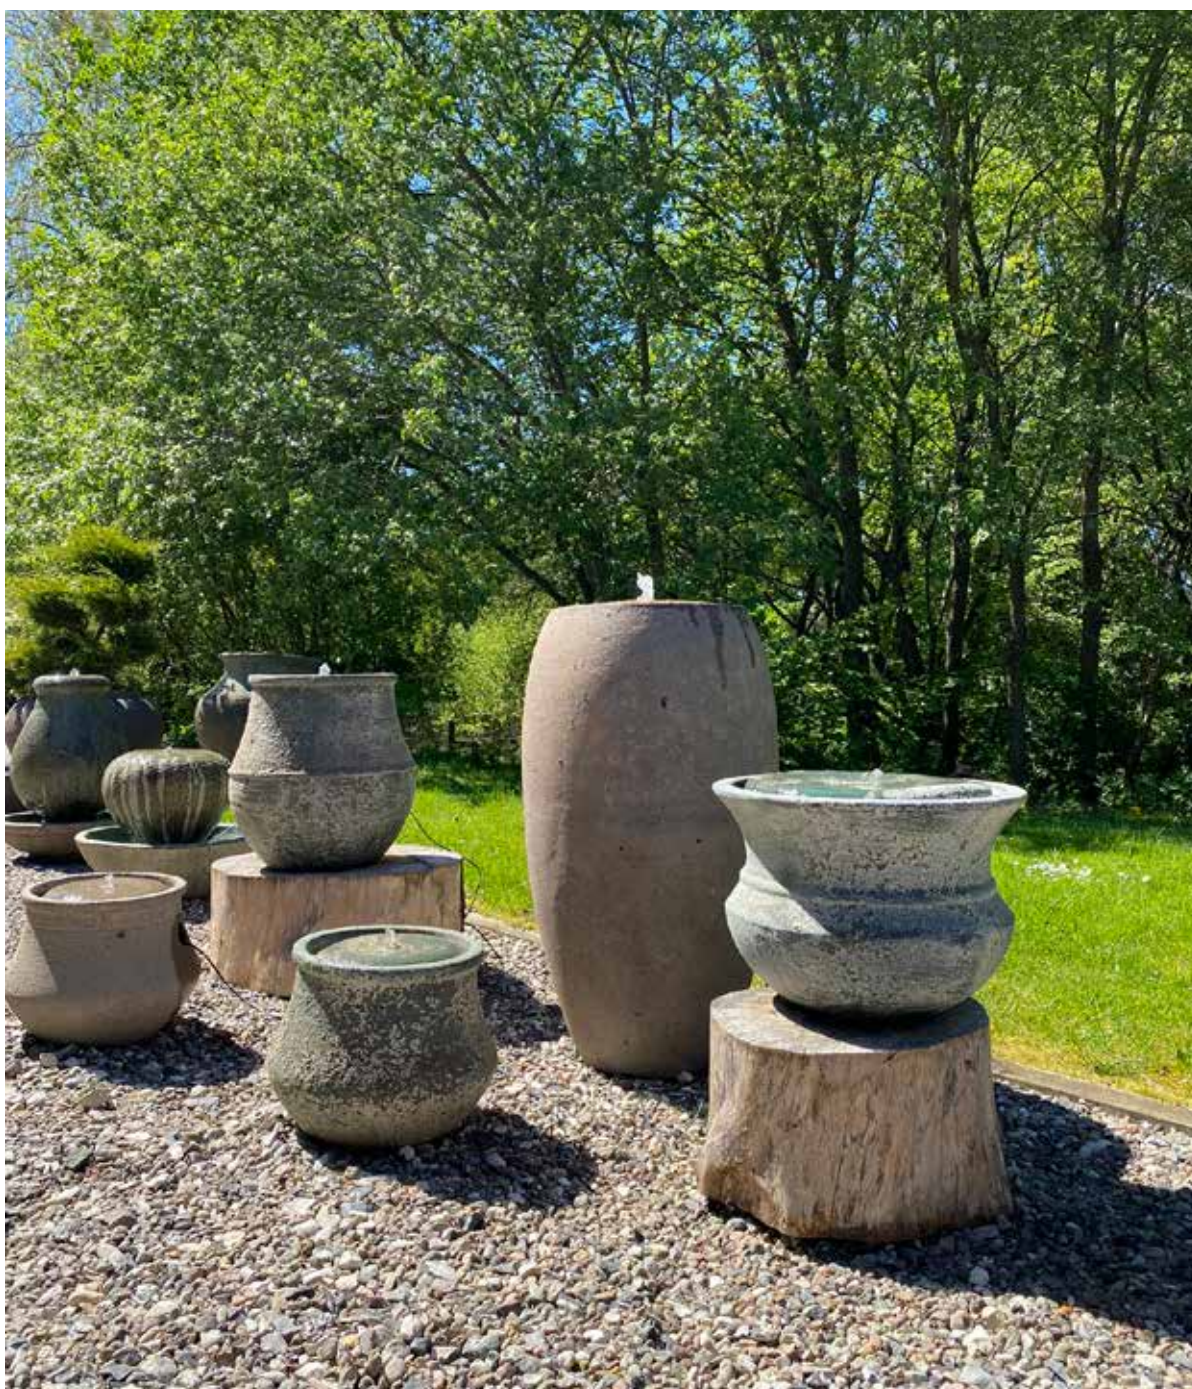

Pumper medfølger ikke - disse købes separat.

Husk at fontæner ikke er frostsikre. De skal tømmes for vand om vinteren og tages ind eller opbevares tørt. Fadet kan opbevares ude, men skal vendes på hovedet, så der ikke samler sig vand i bunden.

Beautiful and quirky fountains that create life and atmosphere in the garden.

Pumps are not included – must be purchased separately.

Note that fountains are not frost-resistant. They must be emptied of water in winter and brought inside/stored in a dry place. The basin can be stored outside but should be turned upside down to avoid water collecting.

Black Soil

Alle black soil krukker er håndlavede, hvorfor hver krukke er unik.

Krukkerne er produceret i en speciel jernholdig lertype, som gør det muligt at fremstille meget store krukker.

Yderst holdbare og frostsikre ved korrekt behandling (gælder ikke vandfade).

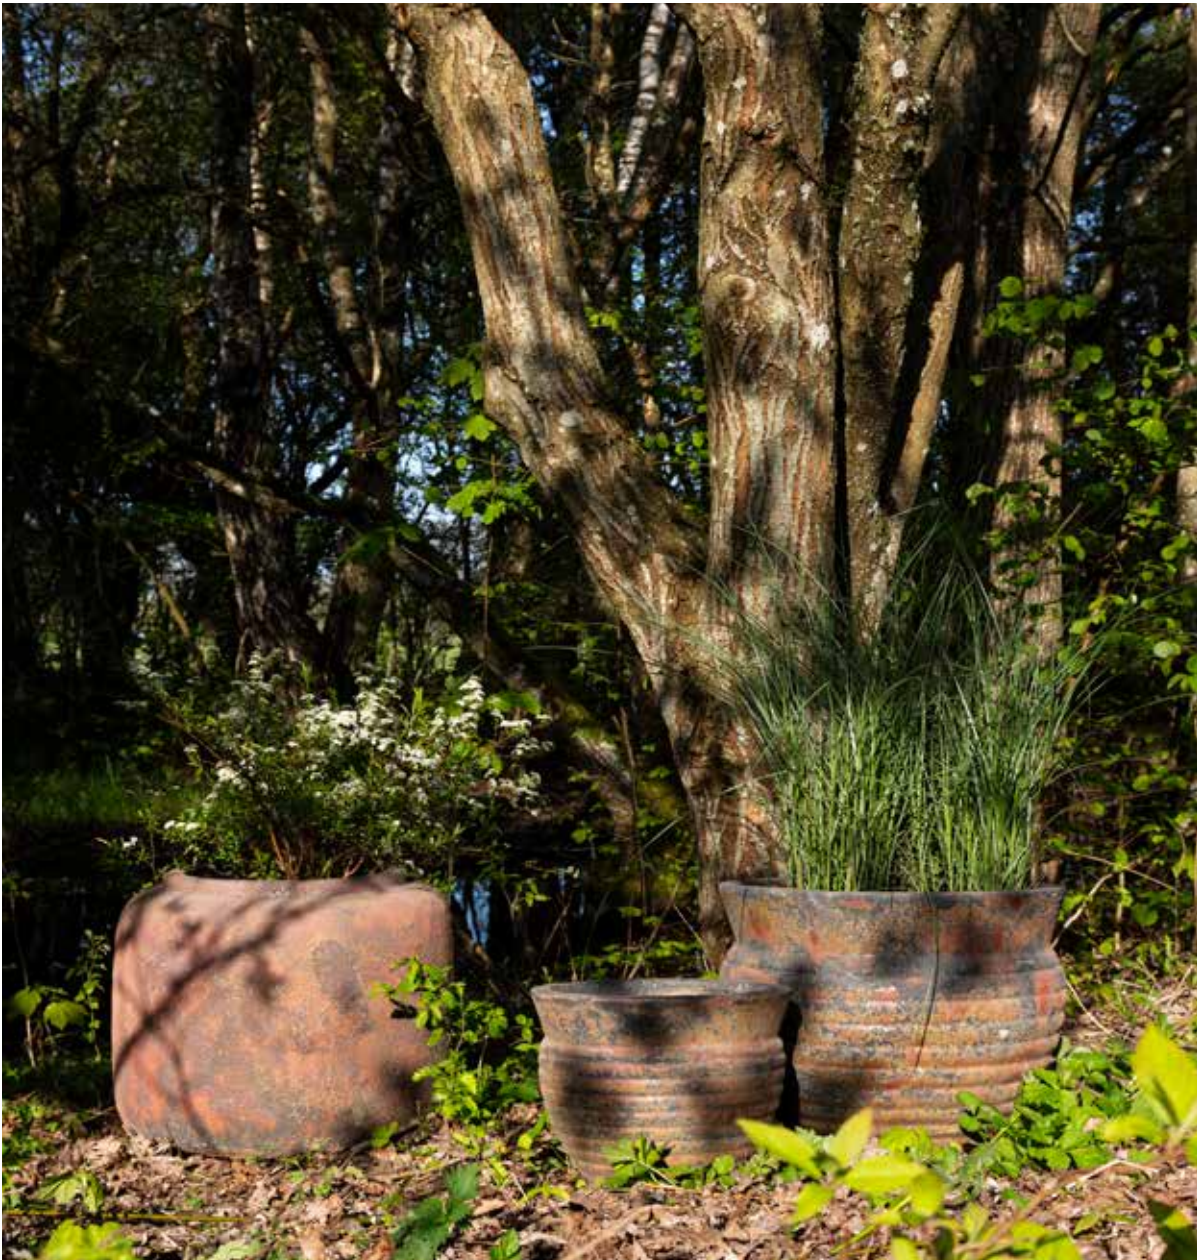

Krukkerne kan leveres i seks forskellige overflader: Sandblæst (SB), Antik (AT), Relic rus metal (RM), Midnight green (MG), Oceanic bronze (OB), og Glat black soil (BC).

All black soil pots are handmade, why each pot is unique.

The pots are produced in a special iron-rich type of clay, which allows for the manufacturing of very large pots.

Very durable and frost resistant when handled correctly (do not apply to water bowls).

The pots come in six different finishes: Sandblasted (SB), Antique (AT), Relic rus metal (RM), Midnight green (MG), Oceanic bronze (OB), and Smooth black soil (BC).

Black soil special

Ny black soil serie.

Alle krukker kan fås i en smuk gylden farve (RYE) samt i en dyb mørkeblå farve (DB).

Krukkerne er frostsikre ved korrekt behandling.

Da krukkerne er lavet af den rustikke black soil ler, vil de have en rustik og struktureret overflade, som kan ses igennem glasseringen.

New series of Black Soil.

All pots are available in a beautiful golden color (RYE) as well as a deep blue color (DB).

The pots are frost resistant when handled correctly.

The pots are made of rustic black soil clay, why they have a rustic and textured surface that are visible through the glaze.

Pottefødder & Underskåle / Pot Feet & Saucers

Grama Design giver frostgaranti på alle krukker.

Garantien er betinget af, at krukken er rigtig tilplantet. Dvs. at man har lavet et godt dræn vha. leca i bunden, og krukken er løftet fra underlaget ved brug af pottefødder.

Se vejledningen på side 5.

Grama Design ensures frost guarantee on all pots.

The guarantee is dependent on the pot being treated correctly when planting.

Proper drainage and placement are required. Use Leca (or similar) at the bottom and make sure the pot is lifted from the surface using pot feet.

See instructions on page 5.

Trækrukker / *Wooden Pots*

Kvalitetsserie af håndlavede krukker i genbrugstræ.

Krukkerne leveres med vandtætte beholdere i genbrugsplast.

Krukkerne kan bruges inde som ude. Hvis de bruges ude, anbefaler vi, at der bores huller i plastbeholderen, for at sikre godt dræn.

*Nogle af modellerne kan leveres med hjul.**

Quality range of handmade pots in recycled wood.

The pots come with waterproof containers made of recycled plastic.

The pots can be used indoors or outdoors. If used outdoors, we recommend drilling holes in the plastic container to ensure good drainage.

*Some models can be supplied with wheels.**

Græske krukker / *Greek Pots*

Smukke græske terracottakrukker i lys blød farve.

Farven vil variere alt efter hvor i ovnen krukken har stået under brændingen, hvorfor farveforskelle altid vil forekomme.

Håndlavede.

Bæredygtigt produceret.

Frostsikre ved korrekt behandling.

Beautiful Greek terracotta pots in a soft light color.

The color will vary depending on where in the kiln the pot was placed during firing.

Handmade.

Sustainably produced.

Frost resistant when handled correctly.
